Professional Summary

Data Engineering leader with 5+ years of experience designing and implementing enterprise-scale data solutions in financial services and insurance. Proven track record of driving significant performance optimizations, pioneering cloud and real-time streaming technologies, and leading cross-functional teams. Expert in Snowflake, AWS, Hadoop, and modern data stack technologies including dbt, Kafka, and PySpark.

Experience

Lead Data Engineer | Insurance

evolv Consulting

Oct 2025 – Present

- Leading a team of 4 data engineers to architect an insurance client's first unified operational data store in Snowflake using dbt
- Navigating complex ambiguities across legacy data platforms from multiple sub-companies to identify data overlaps and establish master data definitions
- Architecting high-performance data pipelines serving a transactional Kong API layer for real-time business insights

Data Engineer | Financial Credit Risk

USAA

Apr 2021 – Oct 2025

- Resolved critical Snowflake performance bottleneck, reducing compute usage by **95%** and significantly decreasing query costs
- Optimized SCD Type 2 queries achieving **90% reduction** in running time (3 hours → 15 minutes) and 70% reduction in data scan volume
- Designed Kafka streaming pipeline for ML model training with staging tables, automated resiliency checks, and idempotent loading
- Led platform modernization migrating **2+ terabytes** from Hadoop to Snowflake using PySpark and parquet format

- Drove Secured Card to Credit Card transition resulting in **30% increase** in member engagement
- Implemented decoupled-push architecture reducing On-Call overhead by **90%**
- Architected cross-organizational data lake POC with AWS S3, reducing transfer time by 50%
- Enhanced PII/PCI/PHI pipeline security with data masking, tokenization, and RBAC

Software Engineer | ETL & Big Data Consultant

HCL America Inc.

Client: USAA | Nov 2017 – Apr 2021

- Pioneered the first project at USAA to utilize AWS cloud and real-time streaming (NiFi/Kafka), transforming batch to real-time processing
- Established AWS S3 to HDFS file transfer routes, enabling cloud-to-on-premise data integration
- Developed 30+ critical decisioning data pipelines in Hadoop supporting credit card risk decisioning
- Built core ETL pipelines using IBM DataStage and DB2 with complex transformations and governance checks
- Created automated schema check process eliminating hours of manual inspection
- Supervised Hadoop projects and mentored colleagues on CI/CD best practices
- Ensured PII/non-PII compliance with Information Governance standards

Technical Skills

CATEGORY	TECHNOLOGIES
Programming	Python (PySpark, Pandas, Polars, SQLAlchemy, FastAPI), SQL, Bash, Git
Data Engineering	dbt, Kafka, Flink, NiFi, Hadoop, IBM DataStage
Cloud & Platforms	AWS (S3, EC2, Redshift, Lambda, Athena), Snowflake, DB2
Data Formats	JSON, Parquet, REST APIs
Visualization	Apache Superset, Looker, Tableau
Practices	CI/CD, Data Governance, RBAC, Data Masking, Tokenization

Education

Key Achievements

First-Mover Innovation – Delivered USAA's first AWS cloud and real-time streaming project

95% Compute Reduction – Resolved critical Snowflake performance bottleneck

90% Query Optimization – Reduced SCD Type 2 queries from 3 hours to 15 minutes

30% Engagement Lift – Led data initiative driving measurable business outcomes

2TB+ Migration – Modernized platform from Hadoop to Snowflake

90% On-Call Reduction – Implemented automation reducing operational overhead
